# HEADOFFICE THE NETHERLANDS

FROM VEGHEL WITH LOVE

When you think about the Netherlands, what springs to mind? If you're racing-minded, we'd guess you'd say Assen. But other than that? Windmills? Heineken? Amsterdam? Canals, cheese, tulips.... a few grams of legal cannabis? Maybe even the red light district?

Though the above may be true, the southern region near Eindhoven is where the magic really happens! That's right, we're talking about Veghel, where the Macna HQ is located.

# OFFICES **ITALY** and

In addition to our headoffice, we openend up 2 other offices. In 2016 one in Italy and in 2018 another one in Portugal. Both with fully stocked dealer showrooms. Spain, France and Portugal are covered from Portugal. From Italy only Italy.... for now.

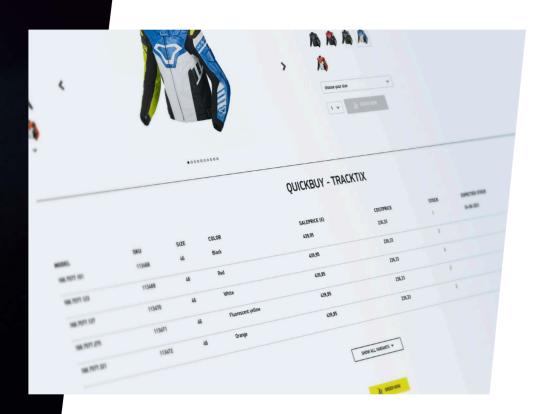

# 58 COUNTRIES ACROSS THE GLOBE

You can find us in 58 countries. That's a lot of different cultures, skin colors, religions, climates, currencies, and other differences – but one thing transcends it all and brings us together: we like to twist the throttle (and be safe with good gear)!

# BUSINESS TO BUSINESS

Worldwide ordering is a piece of cake in our online B2B-environment. Here, you can find realtime stock data, your invoice administration, place orders, or make RMA requests.

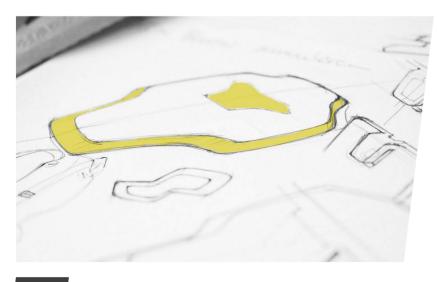

# THE DUTCH **DESIGN PROCESS**

FROM VEGHEL WITH LOVE

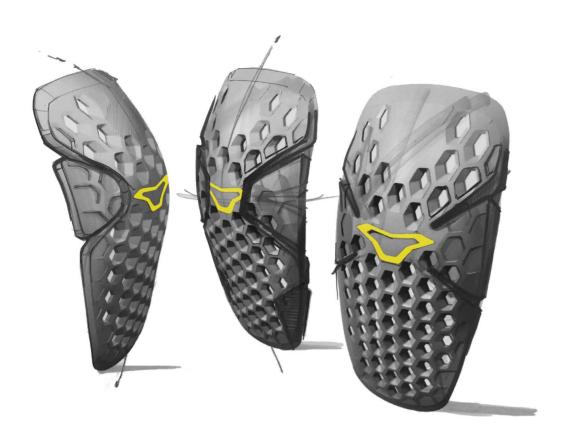

Innovative, minimalist, experimental and quirky at times. Just the terms used to describe Dutch design esthetics. At the same time, you might say the same about the design foundations of Macna.

At the R®D department, the design team is working like a well-oiled machine, creating new ways to improve your ride, blending fashion with technology.

Every technical or styling concept can be traced back to an idea. So it's no surprise that the entire design department is riddled with sketches, 3D prints, samples and fabric swatches.

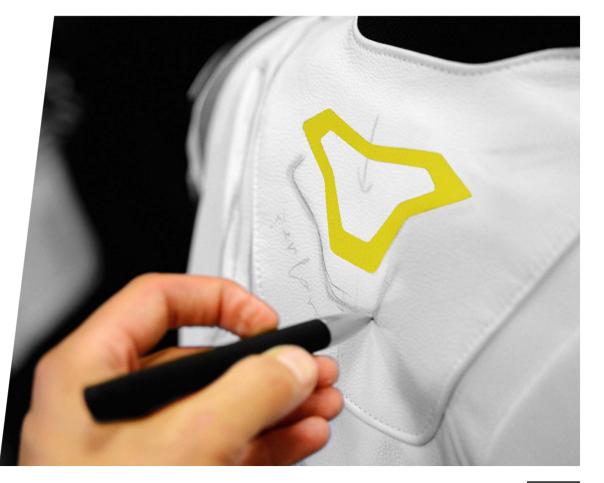

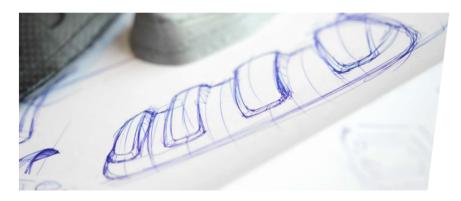

#### 2D, 3D, AND A BUNCH OF FABRIC

If the concept is worth persuing, it will be digitally redrawn. But there's more to it than that: the drawing of a jacket is actually a multi-page manual. It encloses all the materials, panels and parts that will be used, along with manufacturing instructions and much more. A blueprint, if you will.

Then follows the sample stage: the first time seeing a creation in the flesh! But many times, the first sample looks far from the final product you'll see in the stores. It can have replacement parts, different colors, or different materials. But that's okay, as the first sample is subject to cutting and resewing, fitting and testing, and being drawn upon.

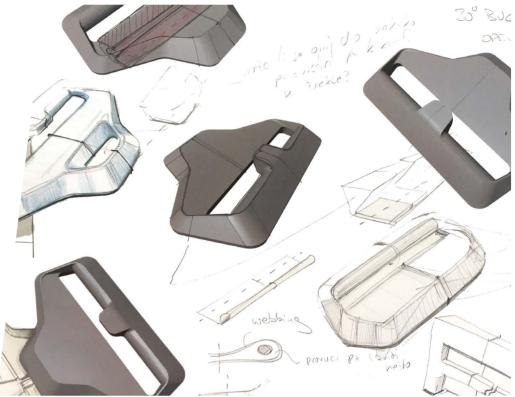

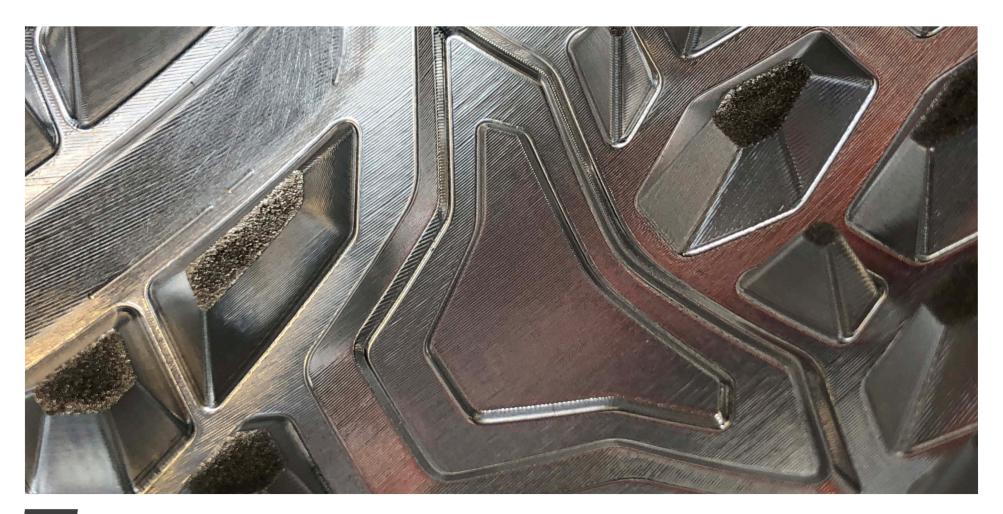

#### ATTENTION TO DETAIL

All 3D parts are developed in-house, from buckles to knee sliders, from pullers to knuckle protectors and everything in between. After all, if it's visible, it has the right to look good. Was obsession for details also a part of Dutch Design? Or is it just us? Oh well...

#### TEST DUMMIES

Several times during the design process, we'd like to shut off our computers and leave the office for some real-world testing. It leads to new insights and improvements, but we also do it simply because we like a good ride!

After all is said and done, the production gets underway, and the results are in the pages ahead of you...

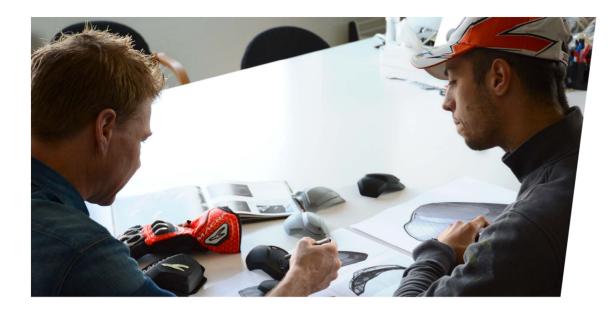

#### WE GOT YOUR BACK AT THE TRACK

Yeah, cocaine is a hell of a drug, but have you ever experienced the adrenaline-spiked thrill that is track riding?

There's nothing that beats the rock-n-roll-feeling of taking your bike to the limit on track.

We understand the addiction and have designed our racing collection accordingly. It doesn't matter if you're racing a track-prepped liter bike or testing the waters on a 125cc on a go-kart track: going all out means you have to trust your equipment.

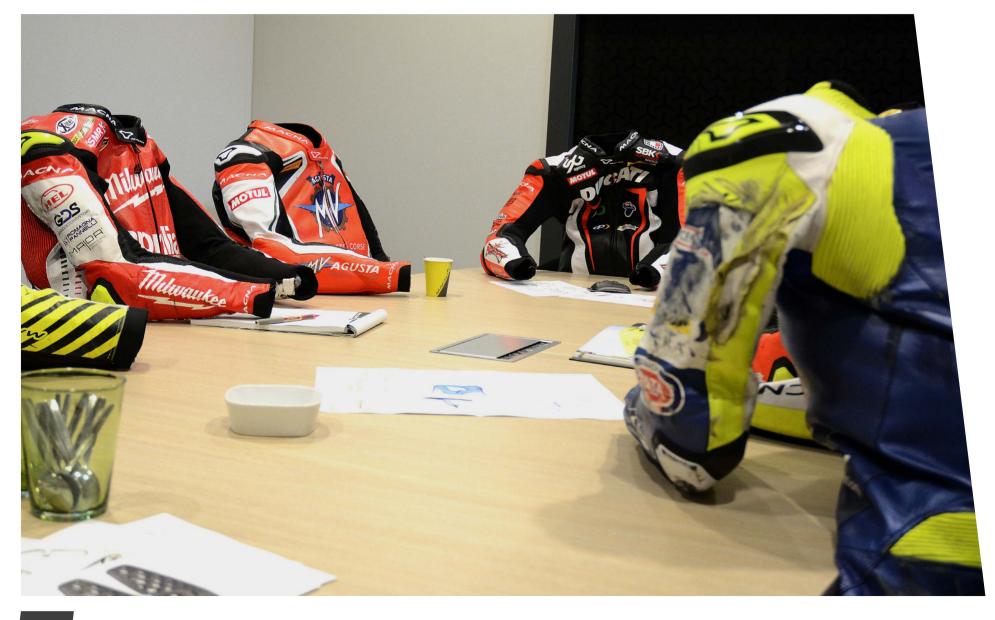

And you can, because we got your back!

#### **TEAMWORK**

You don't just churn out a race collection without putting it to the test. Since 2014, we've been working together with various riders in the MotoGP and World Superbike classes to get valuable first-hand feedback. Slowly it resulted in the development and finetuning of our suits and gloves.

We're not going to pretend we're the biggest riding gear brand at the paddock – because we aren't – but we've slowly built the reputation of providing the best ergonomics and racing service out there. Or in other words: quality over quantity.

### SMALL FINGER BIG EVOLUTION

The most vulnerable digit on your hand. The little finger, or pinky finger if you will, is a notorious topic when it comes to developing a racing glove. It's easily injured, and if you land on it at a wrong angle, it's prone to dislocate. Operating on it is tricky and recovery can be a big long pain in the butt. So when it comes to the pinky finger, you gotta be careful.

Now you probably think: "What's the big deal? Just wrap that bad boy in 5 layers of leather and add some carbon fiber plates on top of it", and you're right - you'd have a virtually indestructable glove.

But nobody will wear it. Above all, racers want feedback and ease of motion. If the glove and fingers are too heavily reinforced, they lack moveability. It's the eternal balance between safety and flexibility.

Now you can have both. In several years of working together with world championship riders, we've innovated and maximized tearing-and abrasion resistance - with solutions you won't find at competing brands - without sacrificing any moveability and feedback.

Nobody can guarantee a 100% safety rate, but we're pretty sure we've got the safest pinky finger on the paddock now.

Hard slider

Doubled leather little finger

Added Superfabric on top and side for extra tearing resistance

Improved shape and placement of Superfabric for better ergonomics

Fused ring- and little finger

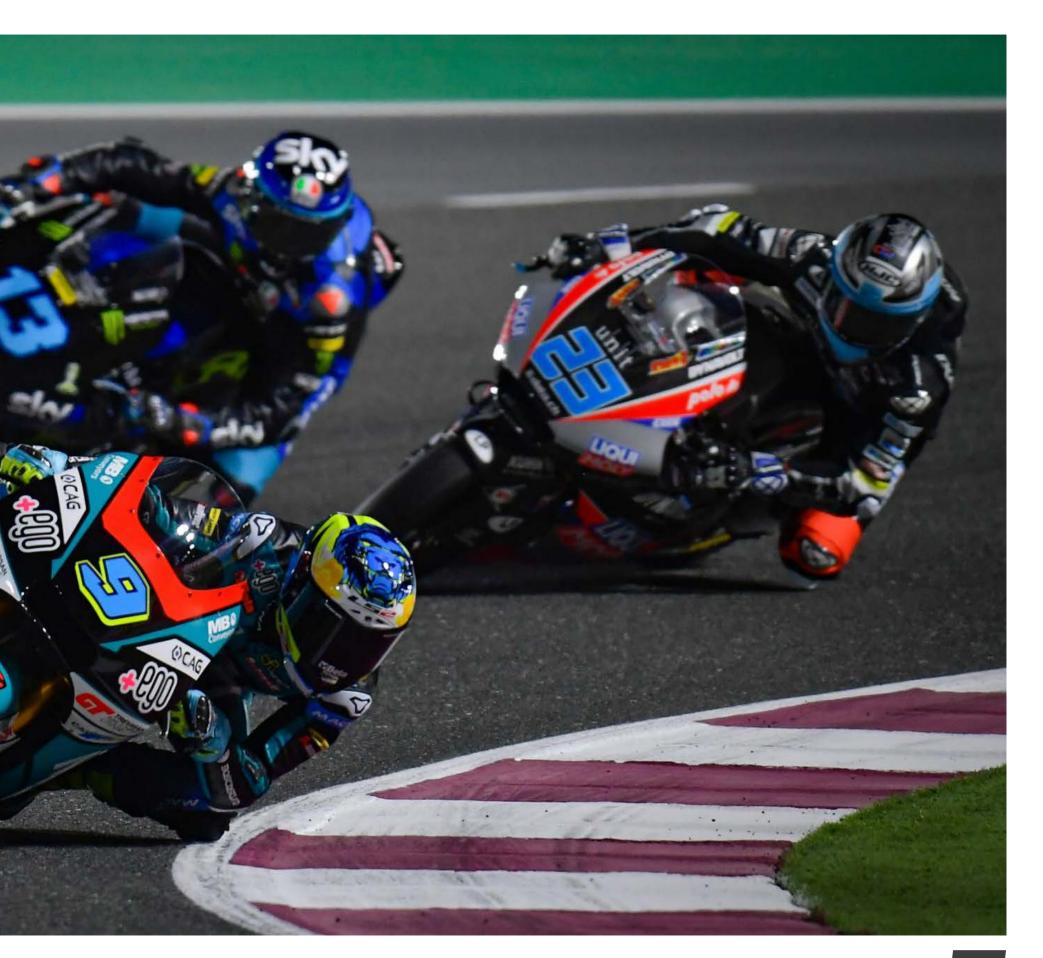

Covered the Superfabric with an extra layer of leather to make it even stronger

Leather is extended and bends over the finger tip for a stronger construction

#### RACING LINE-UP 2021

This season we had the pleasure of adding some more talent to the racing family. Look out for these guys!

# *moto⊠*BO BENDSNEYDER

**SINCE 2020** 

# *moto⊡* ANDREA MANTOVANI

**SINCE 2021** 

**SINCE 2021** 

**SINCE 2018** 

# *moto*CARLOS TATAY

**SINCE 2020** 

**SINCE 2021** 

# WALL OF FAME

Since 2014, there have been so many different riders, suit designs and liveries, it's hard to keep track! See anybody familiar?

#### INSPECT, CLEAN, REPAIR

Balancing on the fine line of the limit often results in a one-way ticket to the gravel trap. It's the risc that comes with the sport. Main thing to worry about: is the rider ok? If so, then it's time to take another go and rush for the service center. Parked at the MotoGP paddock, the service trailer is the workplace of our racing support manager. Here, the suits can be serviced, and there's also a meeting/lounge room where riders can kick back and relax a little...

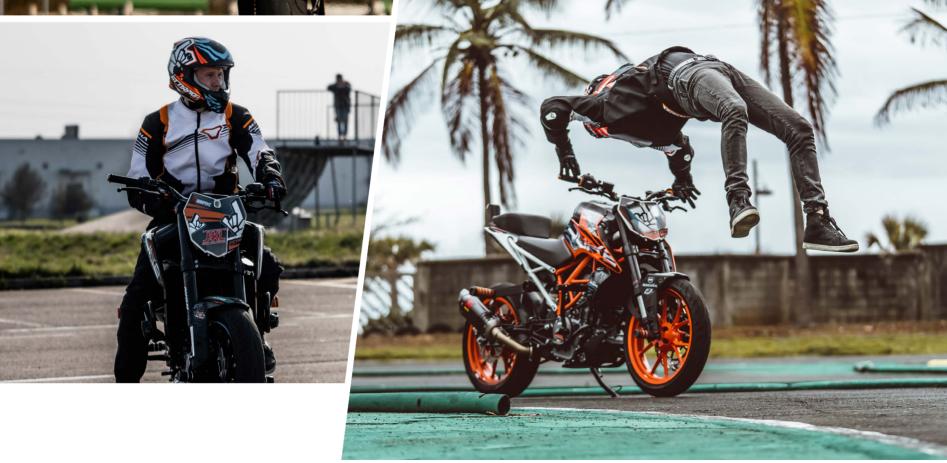

#### DON'T TRY THIS AT HOME

Though he is not a racer, he is a pro rider who pushes himself and his bike to the absolute limits. And often exceeds them when trying new moves, which sometimes means a close encounter with the asphalt of a deserted parking lot... We're talking about Rok Bagoros, KTM factory stunt rider!

We've partnered up with Rok to supply him with the gear to do his job. Stunt riding is intense and the demands for his gear are high: breathability, moveability and of course safety are top priority when doing stand-up wheelies, stoppies, rolling burnouts and even front flips from the handlebars. Oh, and he wanted to look good while doing these, because it's a show after all!

Anyway, it's safe to say our gear is truly tested to the limit.

#### **YOUNG TALENT**

We support the youngest fanatics of the sport through the Race-Kids motorsports academy. Though made for the smallest sizes, the suits and gloves are far from immature: they are held to the same safety standards as the adult versions. This way, we can ensure a safe and fun introduction to the sport.

# INTRODUCING TECH LAB SPECS GUIDE

Let's have a look at what exactly has been made. Because as you know, our gear is loaded with specs! Whether it's something small, like a Zip Grip, or something more substantional, like Night Eye - it's all as important. Topics like protection and visibility get our full attention but we also spend a lot of time working on ways to make your ride as comfortable as possible, like our waterproof and heated gear. We're always looking at ways to improve your ride and try to make it look awesome as well!

### R.I.S.C. **SHOULDER**

These shatter-proof dual density TPU shoulder protectors are solid as a rock: they add safety and durability by covering the seams on critical spots.

#### R.I.S.C. **KNEE**

First introduced in our MotoGP / WSBK suits, the knee protector has found its way into the consumer market through the Voltage suit. The dual density TPU material provides extra protection and abrasion resistance.

### R.I.S.C. **KNEE SLIDER**

A mix between good ergonomics, abrasion resistance and feeling with the tarmac. The TPU knee slider feels at home at the track (or at a nice twisty back road without too much traffic... we won't tell), and was developed with the feedback of the pros.

#### R.I.S.C. **PROTECTION** SHOULDER PROTECTOR S01, S02, **S03** Our in-house developed CE level 1 and level 2 protection range is characterized by their mix of safety, ergonomics and breathability. Developed with the highest possible comfort in mind, the ergonomic design follows the flow of your body to give the ultimate support and achieve a comfortable yet highly protective ride. The light weight material is designed to deliver outstanding impact protection, while the hexagonal structure offers ventilation and flexibility without compromising strenght. To finish it off, all protectors have been **CHEST PROTECTOR** odorized to help making them smell fresh at all times. **FULL BACK PROTECTOR** FB M, FB L KNEE / ELBOW HIP PROTECTOR **PROTECTOR** H03 KE01, KE02, **KE03** KNEE / ELBOW **PROTECTOR** KE01, KE02, **KE03**

LEVEL 1 / LEVEL 2

#### R.I.S.C. **BACK**

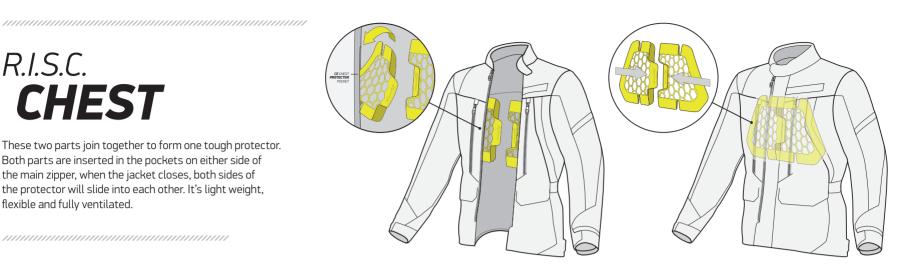

Flexible and light weight protector that covers your entire back. The ergonomic design follows the flow of your back to give the ultimate support and achieve a comfortable jet highly protective ride. The material is designed to deliver outstanding impact protection, while the hexagonal structure offers ventilation and flexibility without compromising strenght

#### R.I.S.C. **CHEST**

These two parts join together to form one tough protector. Both parts are inserted in the pockets on either side of the main zipper, when the jacket closes, both sides of the protector will slide into each other. It's light weight, flexible and fully ventilated.

#### R.I.S.C. **SHOULDER**

These soft and flexible protectors add safety and durability by covering the seams on critical spots. They are fully ventilated and light weight to carry the weight off the world on your shoulders without even noticing it.

# R.I.S.C. **KNEE/ELBOW**

Soft and sturdy protector which covers your entire elbow incase you slide over the asphalt. The ergonomical design and the flexibility provide the ultimate comfort when you are riding.

Offers protection to the hip area incase you decide to make a nasty slide. Because of the sturdy and flexible material, it wil soften the impact of a fall and can be easily inserted into hip prepared pants. They're also fully ventilated for ultimate riding comfort.

# R.I.S.C. **PALM**

Ergomically shaped, the palm protector acts as a sliding pad, but also spreads the force of impact, minimizing injury of the scaphoid bone.

R.I.S.C. **CUFF** 

Flexible but durable TPU cuff protector backed by temperfoam, that acts as both a slider as well as an impact absorber.

#### R.I.S.C. CARBON KNUCKLE

External carbon protection part, pre-formed around the knuckle. Lightweight but very strong.

### R.I.S.C. TPR **FINGER**

TPR elements on the finger add a layer of protection while still retaining flexibility.

External hard protection inserts on the finger act as little sliding pads.

# REINFORCED LITTLE FINGER

During a crash, the little finger is an exposed part of your hand, it is at risk of catching on to something as you slide. The little finger protection is a fixed leather connection between your pinky and ring finger, giving it extra strength and protection.

# REINFORCED **DOUBLE LEATHER**

Double up on leather for extra abrasion resistance on critical places like the side and palm of your hands.

### 

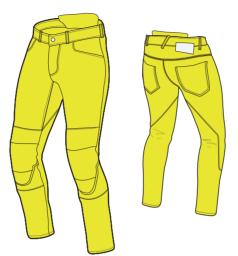

#### **FULL WOVEN**

Instead of featuring a seperate layer of Aramid, the strong fibers are actually woven troughout the fabric of the outer shell.

#### REINFORCEMENTS

Hidden behind the casual look on the outside, there's a lining of Aramid Fiber on the most crucial areas.

### **ARAMID**REINFORCED

The ultra-strong Covec or Cordura fibre is woven throughout the denim fabric to make it more durable.

### REINFORCING SUPERFABRIC

Superfabric is a highly abrasion resistant material. You can easily spot it: look for a dark layer of fabric, overlaid with countless little guard plates on top.

All those little shields are arranged in a way that allows flexibility without sacrificing performance. They are coated in a resin that is also used in the production of helmets and can withstand aggressive abrasion – and are also highly slash / rip resistant.

So all in all, an effective additional layer of protection on key areas. You'll find it in our gloves, jackets, pants, and even our MotoGP suits, where they cover critical seams.

### **HUMP**

The hump protects your spine and neck, but also improves aerodynamics. Depending on which model, it also offers space for a hydration bag.

### **HYDRATION PORT**

You can store a hydration bag in the hump for those hot trackdays.

Secretable the translativities

Zip your pants and jacket together with a Long or Short Connection Zipper.

### HEATSHIELD

Heat-resistant material preventing a meltdown whenever your pants and exhaust acidentally meet eachother

# VISIBILITY

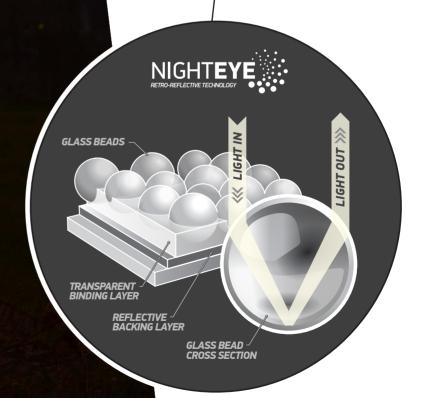

TIME TO BE SEEN

### REFLECTIVE NIGHT EYE

If jackets could have a split personality, they would probably look like this. Common grey by day, incredibly luminous at night: when placed in the range of a car's headlights, it'll light up completely!

So how does this radiant fabric exactly work?
Basically, it's coated with lots of tiny beads.
They act as satellite dishes, reflecting
light back to its source, even from
long distances. Indeed, just like
a traffic sign!

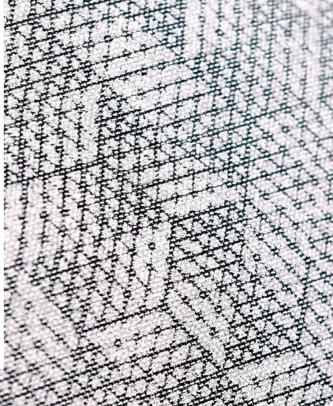

# 4 KINDS OF **NIGHT EYE**

You might ask yourself the question; "Aren't all reflective panels just the same boring fabrics?", but we're here to tell you they're not! Being seen at night is the most important part of Night Eye but that doesn't mean it can't also look amazing!

These are the 4 different kinds of Night Eye:

- Black Night Eye looks like dark grey during the day but reflects at night.
- White Night Eye looks like white during the day but reflects at night.
- Camo Night Eye looks like a dark grey camo print during the day but turns into a reflective camo print at night.
- Tech Night Eye looks like a dark grey technical print during the day but turns into a reflective techincal print at night.

# PREPARED FOR **LED LIGHT**

The LED 2C is a visibility boost in the form of a secondary tail light, fixed high up on your back. It's inserted in the integrated pocket, found on many of our touring jackets. It will also fit older models with velcro. The light can be easily charged with a USB-C cable.

### PREPARED FOR **VISION VEST**

Two integrated buckles at the front and a small zipper on the back. That's all you need to secure a Vision Vest onto your jacket. It can remain attached at all times and won't interfere with the jackets' functionality - except for boosting your visibility, of course!

# PREPARED FOR VISION TECH

The jacket features two small buckles to attach the Vision Tech vest with velcro patches. Can be attached and detached at any time and can stay attached without interfering with the jacket.

# WATERPROOF

LET'S GET DRY TONIGHT

# LIGHT AND DRY RAINTEX DL

Waterproof products in our collection can be equipped with a few different options;

#### Raintex DL

Basically, this direct laminate will keep water out. Not only away from your shirt but completely outside the jacket. The breathable waterproof layer is laminated directly to the outer shell, leaving no space in between these layers to store water. Because only the outer shell gets wet, the jacket will dry fast and breathability remains intact.

So what's the difference with a conventional system?

Well, these so called z-liner systems absorb water. It will pass through the non-waterproof outer shell and only get blocked by the waterproof layer inside. Water will get trapped in between layers, behind plastic protectors, and soak your liner... your jacket will end up drenched! Furthermore, the breathability is

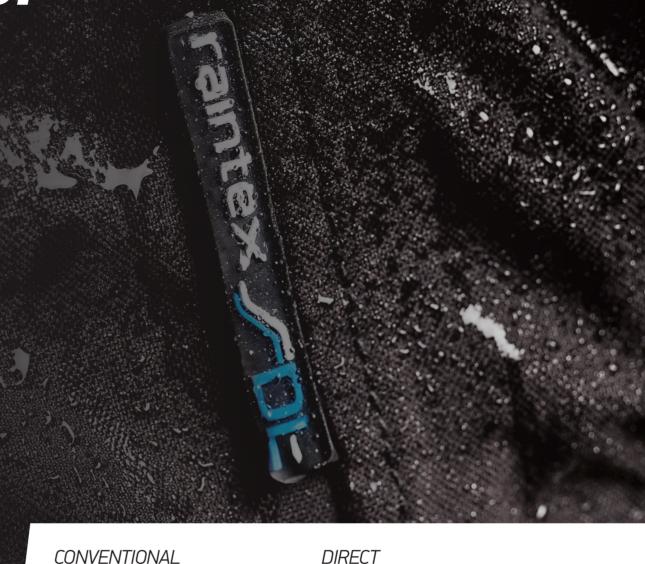

no longer intact and you will feel cold because of water running down the membrane.

#### RTX

Dry! Our Raintex membrane will get you to your destination dry and will cope with your daily shower. The breathability keeps you dry on the inside as well, for best comfort.

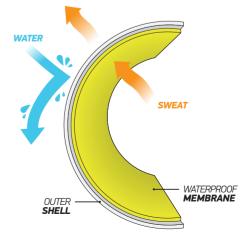

#### RTX plus

The Raintex Plus is just as the normal version, but adds flex. Waterproof and breathable, but also slightly stretchy. A little more freedom of movement, without compromising on the basics.

# WATER PROOF MEMBRANE

### DIRECT **LAMINATE**

## WATER EXHAUST

A clever outlet for rain water, so it can't accumulate between the outer layer and waterproof membrane.

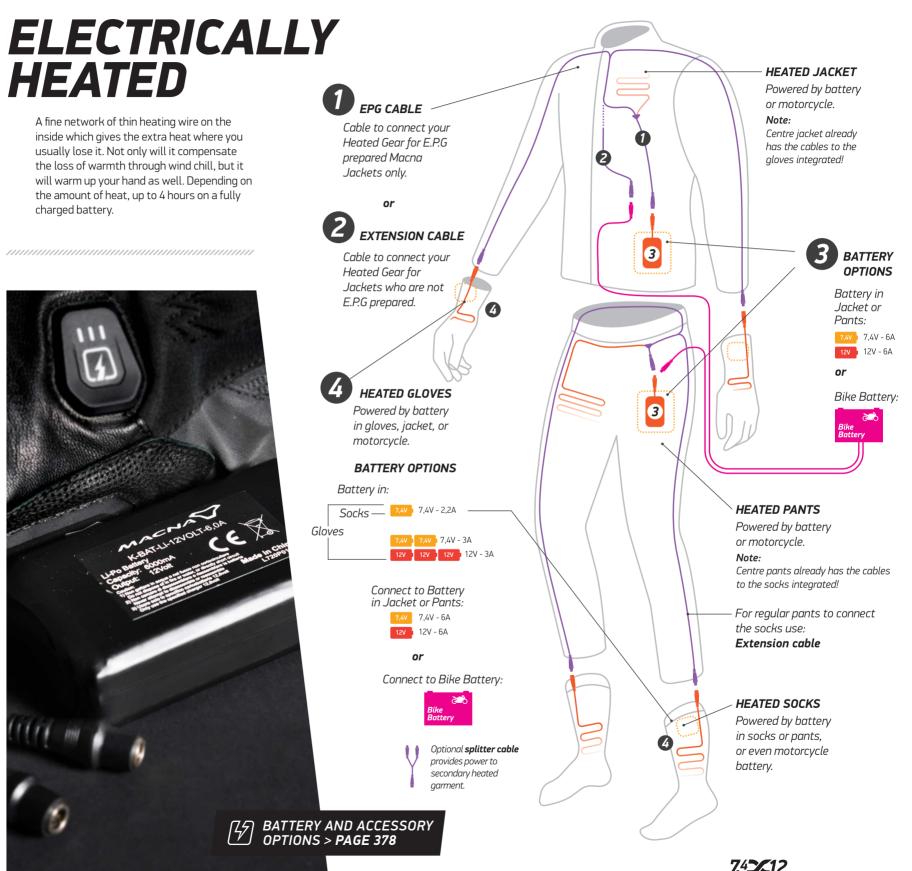

# ZIPPER AQUA STOP

Finally a proper substitute for zippers whenever 100% waterproofness is needed. It has no conventional zipper teeth and even seals an opening in a direct laminated jacket.

### POWER CONTROLLER

You can select four different stages of heat intensity.

# **BLUETOOTH CONNECTIVITY**

**Mobile Control:** manage your settings, group products, set timers, see battery status and much more, all on your phone via Bluetooth. Not only for gloves - it's especially handy when wearing stuff like the heated base layers, where the physical control button is easily tucked away.

### DOWNLOAD THE MACNA HEATED APP

The Macna Heated App will let you take full control over your gear. The Bluetooth connection will let you see all products and control them, separately or simultaneously as a group.

# PREPARED FOR HOTVEST

The jacket is prepared to fit the Hotvest add-on, offering a pouch for the battery.

# COOLING

COLD AS ICE

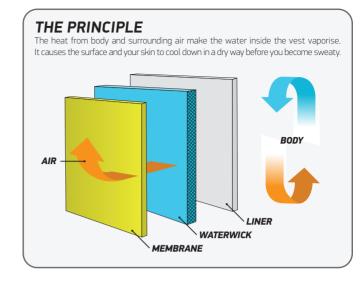

Cooling vests have been around for a while and have proven themselves during the hot summer days! They not only provide extra comfort, but also reduce the risk of heat stress, fatigue and loss of concentration.

# DRY COOLING VEST

Conventional cooling vests need to be worn wet, but the Macna Dry Cooling Vest Evo is an exeption that will keep you dry! But how is that possible? Well, the vest has a 600ml reservoir which needs to be filled with (tap) water. When you put on the vest, the heat from your body and surrounding air make the water inside the vest vaporise. It causes the surface and your skin to cool down in a dry way before you become sweaty.

Depending on the temperature and humidity, a 600ml fill can last up to 3 days. Preferably use the vest in combination with a blow-through jacket, this ensures a maximum cooling effect.

# HYBRID COOLING VEST

It's lightweight and easy to (re) activate. You can use it on your motorcycle but also during sports, work or recreational applications. The Hybrid cooling vest uses more conventional ways of cooling, but the best part of all, it can be used in two different ways!

#### WFT

One way to use it is by using it as a wet cooling vest by simply immersing it in water for 1 to 2 minutes. By evaporation the vest will keep you cool during your ride.

#### **COOL PACKS**

The vest is also prepared for Macna Cool Packs, this way you can place the cool packs inside the vest which will keep you cool for several hours.

# MACNA COOLING PACKS

They are not just your traditional cooling packs you use in your coolbox, these are way better! These cool packs use renewable bio-based Phase Change Material (PCM) cooling technology. It's non-toxic, 100% biodegradable, 20% lighter than water and durable. You can keep your body cool without the risk of frostbite and they don't produce condensation.

There are 3 different temperature inserts to choose from:  $21^{\circ}$ C ( $70^{\circ}$ F),  $29^{\circ}$ C ( $84^{\circ}$ F) and  $37^{\circ}$ C ( $99^{\circ}$ F).

The PCM can be activated in different ways, by putting it in ice water or in a freezer or refrigerator. They can also be activated by axposing them to any ambient temperature lower than:

- 19°C (66°F) with the Cool Pack 21°C (70°F) insert
- 26°C (79°F) with the Cool Pack 29°C (84°F) insert
- 34°C (93°F) with the Cool Pack 37°C (99°F) insert

Once the PCM has reached it's core temperature, it will stay at that temperature for hours. This way you can still enjoy riding on a hot summer day, even when your standing at a trafic light.

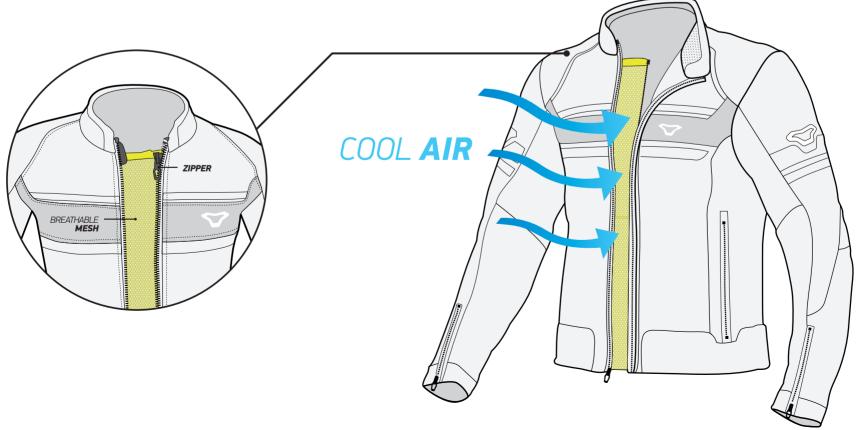

# **VENTILATION**

FEEL THE BREEZE

SUMMER COMFORT SYSTEM

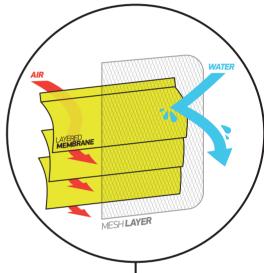

Instead of having a panel that can be unzipped completely, the Lite variant features just one zipper. It can be attached in two different ways; one of which reveals a long strip of mesh.

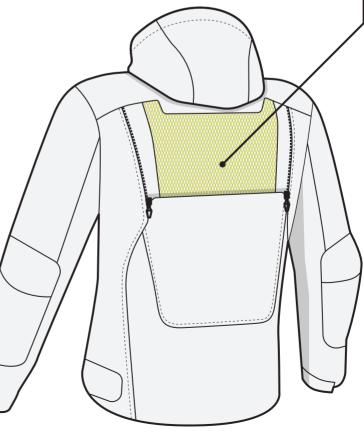

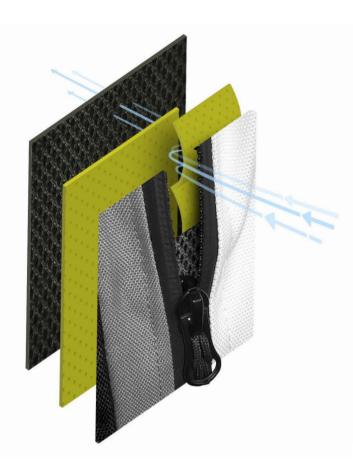

It's important to stay cool on a hot summer day, but sometimes an air zipper just won't do the job. The Air Scoop is a unique layered construction in the membrane that allows air to pass through the membrane without sacrificing waterproofness.

# VENTILATION ZIPPERS @ PANELS

A ventilation zipper with a small opening can give some releave. But sometimes it just won't cut it. A fully vented jacket or pants will still keep you packed in safely, but feels close to riding in a T-shirt. Large mesh ventilation panels placed at the most efficient areas will let wind in and out without much resistance.

### AIR POCKET

Double function air in- and outlets. Perfect to store your stuff, but on hot days the mesh pocket liner can be used to get the air flow going. Don't forget to empty your pockets before use, or the wind will do it for you.

**SLEEVE STRAP** 

**CENTRACK ARM** 

# JACKET **ADJUSTABILITY**

Our jackets are equipped with different kinds of straps to create the perfect fit. With centrack or velcro you can adjust the fit however you please. Straps fitted on the arms, sleeves, hip, waist and collar to give you full control over your fit.

**CENTRACK WAIST** 

A durable coat hanger that's designed to hold the weight of a motorcycle jacket.

# FLOATING COLLAR

The stretchy material around the collar prevents pressure points around the neck.

### **BACK POCKET**

A handy pocket at the lower back of the jacket.

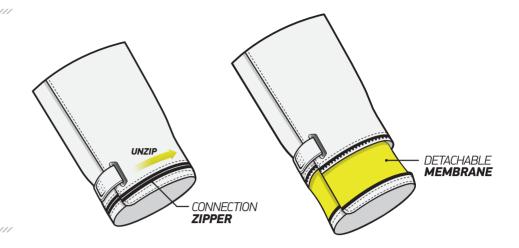

# PREPARED FOR **SUSPENDERS**

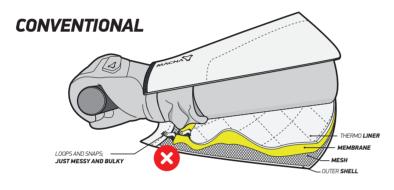

These pants feature hooks to attach the optional Suspender kit.

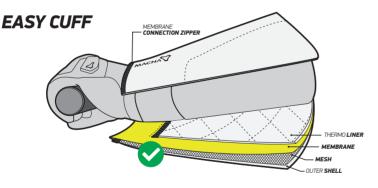

### EASY CUFF

Loose layers in your sleeve are just a big pain in the ass!... or arm actually, but fortunately the Easy Cuff creates a nice and tidy sleeve. Waterproof up to the rim, and easy to access whenever you're quickly changing the jackets' set up. The removable membrane is attached tot the outside of the outer shell, instead of the inside, making it easier to access. This means no more annoying loops and snaps pressing into your arms' skin. Get rid of the mess in your sleeves hooking to your watch and switch to Easy Cuff!

No hooks and loose layers stuck to your boots, or hooked to your feet when taking off your pants. The connection between detachable membrane and outer shell is placed on the outside. The zipper is easy accessable and will not interfere with your feet or boots. Because the membrane is fixed completely at the bottom, the pants are also waterproof all the way to the bottom of the leg.

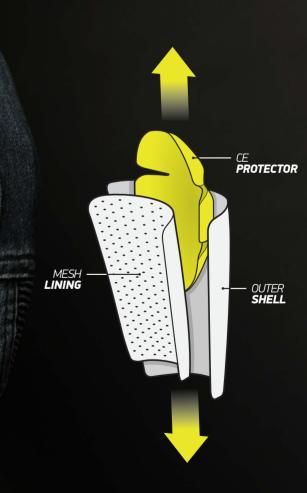

### **WAIST LOCK**

A strong slide-to-lock buckle that's built to last. For our jeans we specially developed the Waist lock lite, which has the strenght of our Waist lock, but thinner and more fashionable.

The protector is accessible from the outside rather than the inside, thanks to the Quick Pocket.

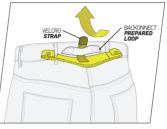

### **BACKONNECT**

An optional short connection zipper for your jeans, patched onto an internal velcro panel or as external version hooked on the beltloops and a leather loop.

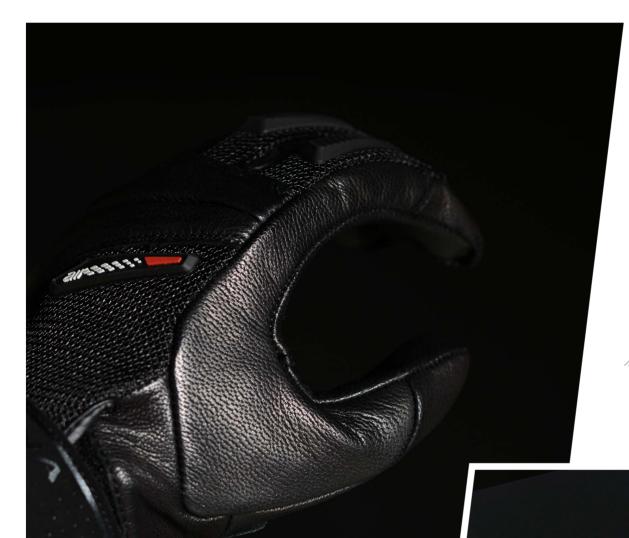

# PANTS & GLOVES GRIP PRINT

A sticky silicon print which gives you maximum grip on almost every surface. The pants can have a silicon print on the buttocks to prevent you from sliding on your seat. Our gloves have the silicon print on the finger or palm for maximum handlebar grip.

# **ERGOTHUMB**

The thumb and index finger share one panel - this reduces seams and pressure points, while also giving a wrinkle-free look.

### **ERGOPINK**

The seam on the pinky finger is designed to prevent pressure points.

# **TOUCH TIP**

An extra layer of conductive fabric on the index finger allows you to control touch-screen devices.

## CENTRACK BUCKLE

Smart adjustment buckle on a 30 degree angle, so the wrist can move more freely.

### 30° BUCKLE

The buckle of the wrist strap is placed at an ergonomically optimized angle of 30 degrees, so the wrist can move freely.

## SCREEN-CLEANER

Sweep the water off your visor with your very own wiper blade, intergrated on the index finger.

# INTRODUCING **LEATHER**RIDING GEAR

Leather jackets: the epitome of cool biker wear. From racing leathers to something more casual - we got you covered.

# **HEATED APP**

# DOWNLOAD THE MACNA HEATED APP

The Macna Heated App will let you take full control over your gear.
The Bluetooth connection will let you see all products and control them, separately or simultaneously as a group. You can use a timer, see battery status and much more.

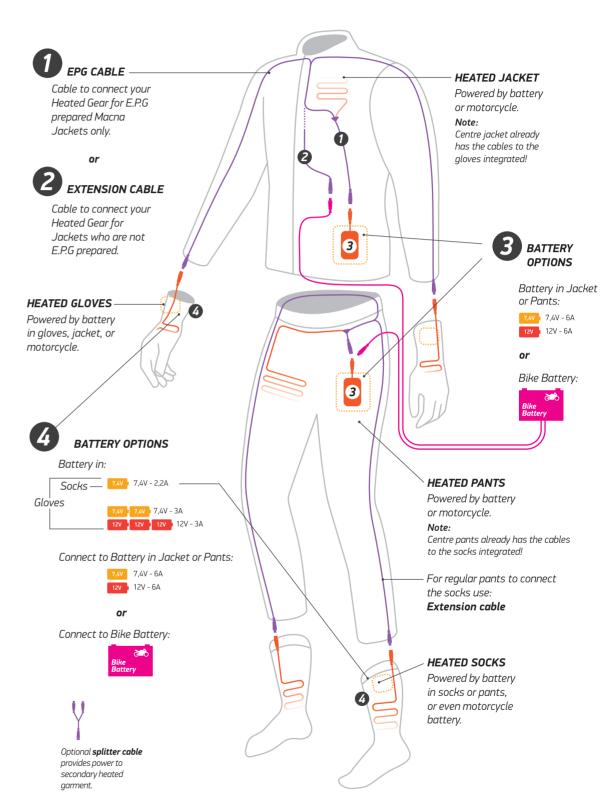

Sounds like a lot, but makes controlling your gear fast and simple.

# **BATTERY AND ACCESSORY OPTIONS**

	POWER ACCESSORY	ART. NO	DESCRIPTION
7,4 VOLT	Single Battery <b>7,4 V</b> K-BAT-7,4V-2,2A	165 8081	Replacement battery for one glove or sock     7,4 volt 2200mA
	Single Battery <b>7,4 V</b> K-BAT-7,4V-3A	165 8061	7,4 volt 3000mA replacement battery for one glove     The battery consists of two separate cells whose dimensions are 40x60x10mm each and weighing 110 gr for each complete battery
	<b>Single Battery 7,4 V</b> K-BAT-7,4V-6A	165 8080	Replacement battery for Centre Jacket / Pants     7,4 volt 6000mA
	Battery + Charger kit K-BAT-7,4V-2,2A	165 8076	Contains two batteries and a charger     For Gloves and Socks
	<b>Battery + Charger kit</b> K-BAT-7,4V-3A	165 8074	Contains two batteries and a charger     For Gloves and Socks
	<b>Battery + Charger kit</b> K-BAT-7,4V-6A	165 8077	Contains a battery and charger     For Jacket and pants or gloves
	<b>7,4V Charger for lithium batteries</b> 7,4 volt K-CHARGER-7,4V-2Ah	165 8063	Battery charger for lithium batteries 7,4 volt     Two outputs to charge two batteries simultaneously with a current of 2000mA
12 VOLT	Single Battery 12 V K-BAT-12V-6A	165 8082	Replacement battery for Centre Jacket / Pants     12 volt 6000mA
	Single Battery 12 V 12 volt K-BAT-12V-3A	165 8062	12 volt 3000mA replacement battery for one glove     The battery consists of three separate cells whose dimensions are 40x60x10mm each and weighing 165 gr for each complete battery
	<b>Battery + Charger kit</b> K-BAT-12V-3A	165 8075	Contains two batteries and a charger     For Gloves and Socks
	<b>Battery + Charger kit</b> K-BAT-12V-6A	165 8078	Contains a battery and charger     For Jacket and pants or gloves
	<b>12V Charger for lithium batteries</b> 12 volt K-CHARGER-12V-2Ah	165 8064	Battery charger for lithium batteries 12 volt     Two outputs to charge two batteries simultaneously with a charge current of 2000mA
BIKE BATTERY	Bike Connection Cable, Universal	165 8067	Power cable with connection to the auxiliary cigarette lighter socket of your motorbike     Cable length: 120 cm
	Bike Connection Cable, Battery	165 8065	140cm power cable with direct connection to the battery poles of your bike     Equipped with eyelets to connect to the battery and a protection fuse     The connector is provided with a removable cap to protect it when not in use
	Bike Connection Cable, BMW	165 8066	Power cable with connection to the auxiliary socket of your BMW motorbike     Cable length: 120 cm
CABLES			Come or extension cable but to connect with better (for Many include with EDC)
	E.P.G. Cable	165 8083	Same as extension cable, but to connect with battery (for Macna jackets with E.P.G.)
	Y-Cable	165 8079	Cable to connect two products to one battery
	Extension Cable	165 8068	Cable to connect gloves to the power supply socket, such as bike or single battery     Cable length: 130 cm
	Flexible Extension Cord, Spiral	165 8073	Spiral extension cord to bring the power from the connector to the chosen Macna garment     The cable is made with an extensible spiral cable 50 cm - 140 cm
	Short Adapter Cable	165 8069	Adapter cable to recharge batteries     Cable length: 15 cm

## ALL SIZES ARE IN CENTIMETRES

All mentioned SIZES are an indication. When choosing a product SIZES according to mentioned body SIZES you should take the variation from the standard sizing in consideration. If for example you have a waist SIZES M and the hip SIZES L, you will need to choose SIZES L. Only occasionally will one persons different SIZES matchall measurements within the same standard SIZES. For optimum safety and comfort we recommend to wear the products slim fit. For the best fitting you are advised to visit your local dealer.

#### 2-LAYER SYSTEM

Jacket or pants have a fixed waterproof layer and detachable thermo liner.

#### 3-LAYER SYSTEM

Jacket or pants have a separately detachable waterproof layer and thermo liner.

#### 30° BUCKLE

The wrist strap buckle is placed under a 30° angle.

#### **AIRVENTS @ PANELS**

These panels or zippers reveal a mesh air intake once opened.

#### **AQUASTOP ZIPPERS**

The alternative for conventional water repellant zippers, 100% waterproof and reliable.

#### **ARM ADJUSTMENT STRAPS**

Width adjustment on the arms to keep the elbow protector in place.

#### **BACKONNECT**

A short connection zipper, fixed on an integrated detachable Velcro panel on the inside of jeans.

#### BACKPOCKET

Large storage pocket at the lower back of the jacket.

### **BELT LOOP**

A loop with snap at the bottom of the jacket to connect the back of your jacket to the belt of your pants.

#### **CE PROTECTORS**

Protectors applying to the EN-1621-2 regulations.

#### CENTRACK

Buckle and strap are rotated by 30 degrees for ergonomic fit. The wrist can move freely.

#### **CLICK PULLER**

Large zipper puller which can be snapped in place to reduce the flapping.

#### **COAT HANGER**

Webbing or plastic hook to hang your coat.

#### COMFIX

The precurved shape and perfect adjustability of the Comfix will make closing simple and flexible.

#### **CONNECTION ZIPPERS**

A short or long connection zipper enables you to have a safe and wind tight connection between jacket and pants.

#### **DIRECT LAMINATION**

The waterproof layer and outer shell material are bonded together and appear as one layer.

#### **EASY CUFF**

Unique Macna solution keeping the sleeve entrance smooth and free of loose parts, by placing the connection on the outside of the sleeve.

#### **EASY CUFF LIGHT**

Connection zipper inside the cuff for detachable layers, easy to reach and use, no messy loose layers.

#### **ERGO THUMB**

Single part for the forefinger sidewall and thumb.

#### FLOATING COLLAR

The collar is surrounded by stretchable fabric for comfortable fitting.

## **ANTI SLIP PRINT**

The printed or welded sticky pattern will keep you in place on your seat.

#### **HEAT SHIELD**

Textile or leather panels at the bottom of the leg, placed towards the motorcycle, which prevent the pants of melting when touching exhaust pipe or other heat sources.

### **HOT VEST PREPARED**

Preparation in the thermo liner of the jacket to mount the Macna electric heated Hotvest.

#### **HYDRATION PORT**

Preparation to mount a hydration pack in your race suits' hump.

#### **ISOFUR**

Synthetic fur with perfect insulating properties and comfortable feeling.

#### LAMINATION

Thermally bonding of two materials.

#### **LED LIGHT PREPARED**

Velcro preparation at the back, just below the collar, where the Macna LED light can be attached to.

#### RAINTEX MEMBRANE

Waterproof and breathable material/layer.

#### **RAINTEX PLUS MEMBRANE**

Waterproof and highly breathable material/layer.

#### RAINTEX DL

Waterproof and breathable material/layer bonded directly to the outshell.

#### OUTDRY

Direct lamination technology for gloves without need for seam sealing.

#### **QUICK POCKET®**

Pocket entrance from the outside to simply access your knee or elbow protector for removal or height adjustment.

#### REFLECTIVE

Light reflecting material, only lights up when light is pointed at it.

#### RISC

Injection moulded external protective parts placed on impact sensitive areas.

#### SCREENCLEANER

Visor cleaner integrated in the finger or thumb of the glove.

#### SENSIGRIP

Outershell and waterproof membrane are fixed together in such a way that the movement between the layers is kept to a minimum.

Improves grip and feeling with your bike's grips.

## SIDE EYE

Laminated reflective parts at the front and back upper parts of the jacket, with the emphasis on the side.

#### SUPERFABRIC

High performance textile with abrasion resistant dots comparable with leathers' abrasion resistance.

#### SUMMER COMFORT SYSTEM

Detachable collar/ front panel unveiling a large mesh panel for ultimate ventilation.

### SUMMER COMFORT SYSTEM LITE

A ventilating mesh strip at the front closure, covered or revealed by choosing a different zipper.

### SUSPENDERS PREPARED

A built-in preparation to attach optional suspenders.

#### THERMO LINER

Insulating (detachable) liner to keep warm.

#### TPR

Thermoplastic Polyurethane Rubber, 3D parts used for reinforcements and technical details.

### TOUCH TIP

A small conductive area on the forefinger for use of touchscreens with your gloves still on.

### **VISION VEST PREPARED**

Integrated preparation for mounting a Macna Visibility Vest.

## WAIST-LOCK 2.0

A strong holder, fixed with studs, holds a special snap in place. Much stronger than traditional metal hooks, and a lot easier to use.

#### WAIST-LOCK LITE

Sturdy fixation of your waist, slides in like a hook, but with the casual look of a snap.

## **WATER EXHAUST**

Mesh area to dispose of water trapped between the outer shell and membrane layers otherwise.

## WINDCOLLAR PREPARED

Preparation at the shell collar of the jacket to mount the Macna Windcollar.

## ZIPGRIP

Rubber grip at the start of a zipper, a lot easier to slide the zip in.

Macna accepts no liability based upon the information in this catalogue. Products and specifications may vary due to necessary modifications. Macna takes no responsibility for printing errors or other inaccuracies.
